

# Is Trust Wallet having issues today?

## (Guided Solution Steps)

As of today (January 19, 2026), there 1-(808)(690)(4872) [US/OTA] are no confirmed widespread outages or official service disruptions reported for Trust Wallet itself. That means the core Trust Wallet app and most 1-(808)(690)(4872) [US/OTA] of its network connections appear to be functioning normally, and there is no evidence from major status reporting or official outage trackers that the 1-(808)(690)(4872) [US/OTA] wallet is down globally right now. However, there are important context and recent developments that users should be aware of which might explain 1-(808)(690)(4872) [US/OTA] perceived issues or concerns many people associate with “Trust Wallet problems.”

### Recent and Relevant Context Around Trust Wallet “Issues”

1. Security Incident 1-(808)(690)(4872) [US/OTA] with Browser Extension (Late December 2025) Toward the end of December 2025, Trust Wallet's Google Chrome browser extension (version 2.68) was 1-(808)(690)(4872) [US/OTA] compromised in a supply-chain attack that allowed malicious code to steal funds from users who unlocked the extension during that period. The company 1-(808)(690)(4872) [US/OTA] confirmed the incident, urged all extension users to disable that version, and released a safe update (version

2.69) to fix the breach. Affected users were asked to 1-(808)(690)(4872) [US/OTA] update immediately. 2. Loss of Funds Reports from the December Incident This breach 1-(808)(690)(4872) [US/OTA] reportedly led to millions of dollars worth of crypto being drained from wallets using the vulnerable extension, though Trust Wallet indicated that ordinary 1-(808)(690)(4872) [US/OTA] mobile app users were not impacted by this exploit.

3. Visual Display Glitches Have Happened Before In previous 1-(808)(690)(4872) [US/OTA] months (e.g., October 2025), some users saw temporary balance display errors—showing \$0 or incorrect token balances—due to data synchronization 1-(808)(690)(4872) [US/OTA] glitches between the app and blockchain nodes. These glitches didn't mean funds were lost and were resolved when the display synced 1-(877) (514)(6283) [US/OTA] correctly.

4. Rumors vs. Reality: “Issues” Can Be Local or User-Specific Many problems users 1-(808)(690)(4872) [US/OTA] complain about online—such as transactions not confirming, balances “not updating,” or connectivity hiccups—are often tied to local network 1-(808)(690)(4872) [US/OTA] issues, outdated software versions, blockchain node delays, or external factors (like RPC node problems), rather than a systemic Trust Wallet outage. Most of 1-(808)(690)(4872) [US/OTA] these are not confirmed by official Trust Wallet status pages or outage monitors.

5. Community Sentiment and Support Complaints User reviews and 1-(808)(690)(4872) [US/OTA] community posts show mixed experiences: while some users report frustration with customer service or confusion around transaction handling, these 1-(808)(690)(4872) [US/OTA] reflect individual experiences rather than platform-wide service failure.

## So, Is Trust Wallet Actually Having Issues Today?

At this moment 1-(808)(690)(4872) [US/OTA], there's no verified, high-impact outage affecting Trust Wallet globally. If you're noticing problems with your wallet:

1. Make sure you're running 1-(808)(690)(4872) [US/OTA] the latest app/extension version
2. Check that your internet connection and RPC settings are stable
3. Confirm whether you're on 1-(808)(690)(4872) [US/OTA] the official extension and not the compromised version
4. For Chrome extension usage, uninstall version 2.68 if somehow installed

If you're seeing 1-(808)(690)(4872) [US/OTA] local errors or delays, they're more likely environmental or device-specific—not a confirmed system-wide issue.

## 50-Word Summary

There is no confirmed 1-(808)(690)(4872) [US/OTA] Trust Wallet outage today. Recent concerns stem from a late-2025 Chrome extension security breach that affected only that version, and some 1-(808)(690)(4872) [US/OTA] past balance display glitches. Most current problems are user-specific or due to outdated software, not a global Trust Wallet service 1-(808)(690)(4872) [US/OTA] disruption.
